

FurLink Objectives

Before the platform is functional, a verified pet service provider must be onboarded, verified, and a profile dashboard must be provided to them. The first objective is to onboard and verify one (1) service provider within the first three (3) months of release, and each provider receives SEO-optimized profile dashboard for improved discoverability. Without service providers, there will be no data collected for the platform and the pet service providers need to be verified, without verified providers the platform lacks credibility. The second objective is to minimize double booking by ensuring that each service provider does not experience booking incidents during the first three (3) months of the release. By achieving this objective, the platform builds trust with pet service providers. The third objective is to enable pet service providers to track monthly sales, customer feedback, and related insights through a business analytics dashboard that will be integrated on the platform by January 8, 2025. Providing a business dashboard will allow pet service providers to make data-driven decisions that will grow their business. The fourth objective is to have an AI-powered haircut preview tool on the platform by October 18, 2025 to enable pet owners to customize their pet's possible haircut style.

Categorized Objectives

Objective	Category	Measure
Onboard and verify one (1) service provider within the first three (3) months of release, and each provider receives search engine optimization (SEO) profile dashboard to improve visibility and potential customer reach.	Business	One (1) verified provider
Minimize double booking by ensuring that each service provider does not experience booking incidents during the first three (3) months of the release.	Performance	Review bookings and identify how many times two customers were booked at the same date and time slot
Enable pet service providers to track monthly sales, customer feedback, and related insights by integrating a business	Business	Complete analytics dashboard

analytics dashboard into the platform by January 8, 2025.		
Allow pet owners to virtually preview potential haircuts on their pets using an AI-powered tool, integrated into the platform by October 18, 2025. The tool must consistently produce clear and usable haircut previews while accurately identifying and matching the selected haircut style to the pet's current hair length and condition.	Business	AI-powered haircut preview tool
