1 Introduction

1.1 Document Purpose

The purpose of this Software Requirements Specification (SRS) document is to clearly define and describe all functional and non-functional requirements for the furlink, version 1.0. This serves as a detailed guide for stakeholders including developers, project managers, testers, and end-users. Ensuring that all sides share a common understanding of the system's goals, constraints, and expected behavior.

1.2 Product Scope

This proposed project aims to develop a website platform to connect dog or cat owners with dog or cat grooming service providers in Makati City, creating more efficient access to pet grooming services. Meanwhile, it also allows service providers to have a wider and a more inclusive reach to their potential customers and organization of their booking system. As a result, this proposed project aims to increase the economic growth through amplifying the pet service industry, making this proposal aligned with SDG number 8.

The project includes dog or cat owners in Makati City that seeks new service options and are open to digital solutions. Another inclusion are small to medium-sized dog or cat grooming service providers based in Makati City that are not located in well-known areas

1.3 Intended Audience and Document Overview

It's essential to acknowledge the target beneficiaries of this project, especially people who are involved in the pet care industry. More specifically, this project is intended to the following groups of people:

- Pet Owners – This proposed project helps pet owners to have efficient access to reliable and nearby pet service providers. Improve user experience and provide convenience in booking pet services through the online platform.
- Pet Service Providers – This proposed project helps pet service providers reach a wider market than their usual local area. Increase visibility and improve organization of booking and scheduling through the system's digitalization.
- Local Communities – This proposed project helps the local community in making quality pet services accessible, improving their standards of pet care in the area, and boosting pet related services through gaining business activity on the platform.

1.4 Definitions, Acronyms and Abbreviations

AI (Artificial Intelligence) – Technology that enables machines to perform tasks that typically require human intelligence, such as image generation or prediction.

API (Application Programming Interface) – A set of tools and protocols that allow different software components to communicate.

Client – The end user or organization for whom the system is being developed.

Cloud-Based Database – A database hosted on remote servers accessed through the internet rather than using local or on-premise infrastructure.

Dashboard – A user interface that provides analytics, summaries, and performance indicators related to system activities.

Deliverables – Documents, modules, or outputs required for submission according to the PBL schedule.

Database – A structured collection of data stored and accessed electronically, in this project handled through Supabase.

furlink – The name of the proposed web-based pet grooming service booking platform.

Grooming Preview (AI Grooming Tool) – A feature that generates an estimated visual representation of a pet's haircut using AI technology.

HTML (HyperText Markup Language) – Standard language used to structure and display content on the web.

Local Service Provider – A small or medium-sized pet grooming business within Makati City using the platform to reach customers.

Messaging Channel – An in-platform communication feature that allows pet owners and service providers to exchange messages.

MVP (Minimum Viable Product) – An early version of the system that includes essential features for initial adoption and testing.

PBL (Project-Based Learning) – The instructional approach governing the project timeline, milestones, and deliverables.

Pet Owner – The end user looking to book grooming services for their dog or cat.

Platform – The Furlink website where users interact, book, and manage grooming services.

SDG (Sustainable Development Goal) – UN-defined global goals; the project aligns with SDG No. 8, focusing on economic growth.

Service Listing – A feature where grooming providers publish available services and pricing.

Service Provider / Pet Service Provider – A business offering dog or cat grooming services through the platform.

Supabase – A cloud-based backend platform providing database, authentication, and storage services.

UI (User Interface) – The visual elements users interact with in the platform.

UML (Unified Modeling Language) – A standardized modeling language used to represent software structure, behavior, and architecture in diagrams.

User – Any individual interacting with the system, including pet owners and service providers.

User Registration – The account creation process required before accessing platform features.

Web Platform – The online system where Furlink's services are delivered and accessed via a browser.

1.5 Document Conventions

Font: Arial

Font size: 11

Spacing and Margins: single-spaced with 1-inch margins on all sides

Section Titles: Section and subsection titles are in IEEE format and bolded

Tables and Figures: All tables and figures are numbered sequentially and properly labelled

2 Overall Description

2.1 Product Overview

As a startup, furlink aims to modernize the way pet grooming services are booked and managed in the Philippines. Unlike platforms such as Agoda or Airbnb—which focus on property and hotel bookings—furlink specializes in connecting dog or cat owners with pet grooming service providers through a streamlined digital platform.

furlink offers a hassle-free experience for both customers and service providers. It enables grooming businesses to advertise their services while allowing pet owners to discover, schedule, and manage appointments in one place. Additionally, the platform integrates an innovative AI-powered grooming

preview tool, giving users a visual reference of potential pet haircut styles before booking—bridging the gap between customer expectations and actual grooming outcomes.

Designed as a local-first startup solution, furlink initially targets grooming services within select cities, with plans to expand as adoption grows.

Figure 1 furlink Deployment Diagram

2.2 Product Functionality

This project will include the following features:

1. User registration and login: Allows both dog or cat owners and service providers to create an account and login to their account.
2. Service listing: Allows service providers to post their services on the platform.
3. Booking: Enables dog or cat owners to book pet services on the platform.
4. AI pet haircut generator: Enables dog or cat owners to upload a photo of their pet and receive an AI-generated preview for their desired haircut style.
5. Pet service provider recommendation: Provides dog or cat owners recommended pet service providers based on their activities.
6. Dashboard: Allows pet service providers to track bookings, revenue, and customer insights.
7. Feedback form: Allows dog or cat owners to submit their review to the service provider.

2.3 Design and Implementation Constraints

The development of furlink system is put through several constraints that will limit the options that are available to develop and design furlink. First, the team must follow the PBL-mandated schedule for the submission of all project deliverables which gives a limited time for development. This limited development timeframe affects the level of system refinement, iteration cycles, and the complexity of features that can be implemented within the project period. Second, the system will use Supabase a cloud-based backend database with no support for any on-premises servers. This requires for the system to solely rely on Supabase's authentication, storage, and other database services.

This project will exclude the following features:

1. Booking of pet care services with insurance.

2. Other pet services such as veterinary care, pet supplies, etc.
3. Pet transportation services
4. The system does not process any payments. It does not use in-app payment through third-party gateways.
5. In-depth financial reporting tools.

2.4 Assumptions and Dependencies

Assumptions

- If there is a potential client that does not have a full working system.
- If there is a potential client, they will fully fund the financial requirements of the project.
- There will be one pet grooming service provider that will be onboard.

Constraints

- Limited financial resources.
- Heavily relies on open-source and free-tier tools.
- Limited time is given.
- The MVP aims to be completed by February 21, 2026.

3 Specific Requirements

3.1 External Interface Requirements

3.1.1 User Interfaces

On the Furlink landing page, the system should present users with the primary entry point for booking or setting up pet grooming service listings. The interface features a navigation header providing access to platform information via "About furlink," the ability to register as a pet service provider through "Become a Service Provider," and a "Sign Up" function for new users. Included on this page is a "Book now" function, which allows users to book their preferred service.

Figure 3 furlink Login Page

On the furlink Login page, the system provides a centralized interface for registered users to access their accounts. The system should present input fields for the user's Email Address and Password to verify credentials. Included in this interface is a "Login" function to initiate the authentication process, as well as a visibility toggle for the password field to ensure data accuracy during entry. For users who do not have an account registered, the system displays a redirection link to the "Sign up here" function.

The screenshot shows the 'Create Your Account' registration page for furlink. At the top, there is a navigation bar with the furlink logo, links for 'About furlink', 'Become a Service Provider', and a 'Sign Up' button. The main heading is 'Create Your Account' with a subtext: 'You are a step closer to a hassle-free booking experience'. The form includes fields for 'First Name', 'Last Name', 'Email Address' (pre-filled with 'michelle.pineda@gmail.com'), 'Enter a valid Philippine number (Ex: 9100000000)', 'Date of Birth' (format dd/mm/yyyy), 'Password', and 'Confirm Password'. There is a checkbox for 'I agree to the Terms and Privacy Policy' and a 'Register' button. Below the button, it says 'Already have an account? Login here'. At the bottom, there is a footer with '© 2025 furlink', links for 'Terms and Conditions' and 'Privacy Policy', and social media icons for Facebook, Instagram, and Email.

© 2025 furlink Terms and Conditions Privacy Policy

Figure 4 furlink Registration Page

The screenshot shows the 'My Profile' account page for furlink. At the top, there is a navigation bar with the furlink logo, a 'Switch to Perfect' button, and notification and profile icons. The main heading is 'My Profile' with a subtext: 'Manage your personal information and security'. The page is divided into three sections: 'Account Info', 'Personal Details', and 'Security'. The 'Account Info' section shows the 'Email Address' (michelle.pineda@gmail.com) with a note 'Email cannot be changed.' The 'Personal Details' section shows 'First Name' (Michelle), 'Last Name' (Pineda), and 'Mobile Number' (9100000000). The 'Security' section has a heading 'Change your password below.' and fields for 'New Password', 'Confirm Password', and 'Confirm New Password'.

3.1.2 Hardware Interfaces

The furlink web app requires appropriate hardware and network configurations to ensure reliable and efficient system performance. The system operates using standard HTTP/HTTPS protocols to facilitate secure and seamless communication between user devices and backend services, maintaining compliance with modern web standards and data protection practices.

furlink is hosted on a cloud-based infrastructure, where core application files such as HTML, JavaScript, and media assets are stored and delivered through cloud hosting services. While no specialized hardware is required on the user side, sufficient device storage is recommended to support temporary caching of data for improved responsiveness. In environments protected by network firewalls, the necessary ports must be properly configured to enable access to the platform’s cloud-hosted services, ensuring uninterrupted connectivity between users and the furlink system.

3.1.3 Software Interfaces

Our system integrates with the following software components:

3.2 Functional Requirements

- 3.2.1 F1:** The system shall allow users to register for an account on the website.
- 3.2.2 F2:** The system shall allow registered users to log in to the website using valid credentials.
- 3.2.3 F3:** The system shall allow users to view, update, and manage their account information.
- 3.2.4 F4:** The system shall allow dog or cat owners to browse available pet grooming services on the website.
- 3.2.5 F5:** The system shall allow dog or cat owners to book an appointment with pet service providers.
- 3.2.6 F6:** The system shall allow dog or cat owners to submit feedback and reviews for pet service providers.
- 3.2.7 F7:** The system shall allow dog or cat service providers to create, read, update, and delete their service listings.
- 3.2.8 F8:** The system shall allow dog or cat service providers to view their posted service listings.
- 3.2.9 F9:** The system shall generate an AI-based dog or cat haircut preview based on user-uploaded images.
- 3.2.10 F10:** The system shall provide administrators with secure login access to an administrative interface.
- 3.2.11 F11:** The system shall allow administrators to monitor and manage user activities within the system.
- 3.2.12 F12:** The system shall allow dog or cat service providers to access a dashboard displaying booking and performance information.
- 3.2.13 F13:** The system shall allow dog or cat service providers to switch a standard pet owner account to a service provider account, subject to system rules.
- 3.2.14 F14:** The system shall allow dog or cat service providers to manage booking requests, including accepting or rejecting appointments.
- 3.2.15 F15:** The system shall allow pet owners to cancel their booking requests.
- 3.2.16 F16:** The system shall allow pet owners to reschedule their booking requests before the service provider accepts the booking.

- 3.2.17 F17:** The system shall allow dog or cat service providers to view and download reports generated from booking data.
- 3.2.18 F18:** The system shall allow administrators to view and download reports generated from user activity data.
- 3.2.19 F19:** The system shall allow pet owners to submit payment verification for an approved booking appointment.
- 3.2.20 F20:** The system shall allow dog or cat service providers to delete their posted service listings.
- 3.2.21 F21:** The system shall allow dog or cat service providers to confirm or decline the payment verification submitted by pet owners.
- 3.2.22 F22:** The system shall allow application administrators to accept or reject pet service provider listings before they become publicly visible.
- 3.2.23 F23:** The system shall allow dog or cat service providers to modify or update details of their existing service listings.

3.3 Use Case Model

Figure 2 Use Case Diagram

3.3.1 Use Case #1

Use Case Name: Manage Account User account registration

Use Case ID:	UC-01
Author	Lalaine Andaya
Purpose	Allow users to register to book services, and for them to post their services.
Requirement Traceability	PR-01
Priority	High
Preconditions	System is online
Postconditions	User must be able to register and login to the system
Actors	Pet owner
Flow of Actions	Basic Flow 1. Open webapp 2. User is brought to the home page 3. User clicks "Sign Up" button from the homepage.

	- Input required fields (first name, last name, email address, mobile number, date of birth, password, and confirmed password). User also have agreed to the Terms and Privacy Policy by clicking the checkbox. - User clicks "Register" - System validates input. - User will be redirected to the homepage. Alternative Flow <i>Email already in use</i> - Open webapp - User is brought to the home page - User clicks "Sign Up" button from the homepage. - Input required fields (first name, last name, email address, mobile number, date of birth, password, and confirmed password). User also have agreed to the Terms and Privacy Policy by clicking the checkbox. - User clicks "Register" - The user is prompted with a message "The email is already in use. Please try a different email or login here." - The page stays in the sign-up page <i>Passwords not matching</i> - Open webapp - User is brought to the home page - User clicks "Sign Up" button from the homepage. - Input required fields (first name, last name, email address, mobile number, date of birth, password, and confirmed password). User also have agreed to the Terms and Privacy Policy by clicking the checkbox. - User enters mismatched passwords. - The system displays the error "Passwords must match." - The page stays in the sign-up page.
--	--

3.3.2 Use Case #2

Use Case Name: Manage Account User Login

Use Case ID:	UC-02
Author	Lalaine Andaya
Purpose	User must be able to login successfully and access the platform.
Requirement Traceability	- PR-02 - PR-10
Priority	High
Preconditions	- User must be registered - System is online
Postconditions	User must be able to login successfully and be redirected to the homepage.
Actors	- Pet owner - Admin
Flow of Actions	Basic Flow (Pet owner login)

1. Open webapp
2. User is brought to the home page
3. User clicks "Login" button from the homepage.
4. Input username or email and password
5. User clicks "Login"
6. The system validates input and determines user role.
7. User will be redirected to the homepage after successful validation.

Alternative Flow*Invalid account*

8. Open webapp
9. User is brought to the home page
10. User clicks "Login" button from the homepage.
11. Input username or email and password
12. User clicks "Login"
13. The user is prompted with a message "Don't have an account? Sign up here."
14. The page stays in the login page
15. The user can retry logging in or exit the webapp.

Incorrect credentials

1. Open webapp
2. User is brought to the home page
3. User clicks "Login" button from the homepage.
4. Input username or email and password
5. User clicks "Login"
6. The user is prompted with a message "Invalid email or password"
7. The page stays in the login page
8. The user can retry logging in or exit the webapp.

3.3.3 Use Case #3**Use Case Name: Manage Account User (Pet Owner & Administrator) Account Modification**

Use Case ID:	UC-03
Author	Atasha Frances Gayle Doria
Purpose	Allow pet owner and administrator to successfully modify their account details.
Requirement Traceability	PR-03
Priority	Medium
Preconditions	• System is online • Pet owners and administrator must be logged-in • Administrator must be registered and have pre-registered credentials
Postconditions	• Pet owner successfully modified account details. • Pet owner successfully modified password
Actors	• Pet Owner • Administrator
Flow of Actions	Basic Flow <i>Pet Owner Account Personal Information Modification</i> 1. Pet owner clicks on the “Account” icon in the navigation bar 2. Pet owner clicks on the “Profile” button 3. Pet owner is redirected to Profile page 4. Pet owner edits can edit personal details such as first name, last name, and mobile number. 5. Pet owner clicks “Save Changes” button 6. The system confirms the Pet owner’s action 7. Pet owner clicks “Yes, save” to save the changes 8. The system updates the pet owner’s details <i>Pet Owner Changes Password</i> 1. Pet owner clicks on the “Account” icon in the navigation bar 2. Pet owner clicks on the “Profile” button 3. Pet owner is redirected to Profile page 4. Pet owner entered a new password and confirmed password 5. The system validates if password and confirmed password matched and new 6. Pet owner clicks “Save Changes” button 7. The system confirms the Pet owner’s action 8. Pet owner clicks “Yes, save” to save the changes 9. The system updates the pet owner’s details <i>Administrator Account Modification</i> 1. Open webapp 2. Administrator is brought to the login page 3. Administrator clicks “Login” button from the homepage 4. Input pre-registered email and password given by the super admin 5. Clicks “Login” button to successfully login 6. The system validates input and determines admin role

	7. The system redirects administrator to account modification page to change password 8. Administrator input new password and confirm password 9. Clicks "Change Password" 10. The system validates administrator input 11. The system processes administrator changes of password by updating administrator's password 12. Administrator receives a confirmation message 13. Administrator will be redirected to admin interface Alternative Flow <i>Pet Owner personal information has missing fields</i> 1. Pet owner clicks on the "Account" icon in the navigation bar 2. Pet owner clicks on the "Profile" button 3. Pet owner is redirected to Profile page 4. Pet owner edits can edit personal details has missing fields (last name and first name) 5. Pet owner clicks "Save Changes" button 6. The field errors show alert <i>Pet Owner mobile number invalid format</i> 1. Pet owner clicks on the "Account" icon in the navigation bar 2. Pet owner clicks on the "Profile" button 3. Pet owner is redirected to Profile page 4. Pet owners provide invalid phone number 5. Pet owner clicks "Save Changes" button 6. The field errors show alert <i>Pet Owner use current password when changing password</i> 1. Pet owner clicks on the "Account" icon in the navigation bar 2. Pet owner clicks on the "Profile" button 3. Pet owner is redirected to Profile page 4. Pet owner entered a current password and confirmed password 5. The system validates if password and confirmed password matched and new 6. Pet owner clicks "Save Changes" button 7. The system will show a message "New password should be different from the old password." <i>Pet owner confirmed password does not match</i> 1. Pet owner clicks on the "Account" icon in the navigation bar 2. Pet owner clicks on the "Profile" button 3. Pet owner is redirected to Profile page 4. Pet owner entered a password and confirmed password 5. Pet owner clicks "Save Changes" button 6. The system validates if password and confirmed password matched and new 7. Confirm password field will show an error message. <i>Administrator mismatch password</i> 1. Open webapp 2. Administrator is brought to the login page
--	---

	3. Administrator clicks “Login” button from the homepage 4. Input pre-registered email and password given by the super admin 5. Clicks “Login” button to successfully login 6. The system validates input and determines admin role 7. The system redirects administrator to account modification page to change password 8. Administrator input new password and confirm password 9. Clicks “Change Password” 10. The system validates administrator input 11. The system will show an error message “Passwords do not match.” <i>Administrators use the same provided password</i> 1. Open webapp 2. Administrator is brought to the login page 3. Administrator clicks “Login” button from the homepage 4. Input pre-registered email and password given by the super admin 5. Clicks “Login” button to successfully login 6. The system validates input and determines admin role 7. The system redirects administrator to account modification page to change password 8. Administrator input new password and confirm password 9. Clicks “Change Password” 10. The system validates administrator input 11. The system will show an error message “Failed to update password. Please try again.”
--	---

3.3.4 Use Case #4

Use Case Name: Manage Account Pet Owner Deactivate Account

Use Case ID:	UC-04
Author	Atasha Frances Gayle Doria
Purpose	Allow pet owners to successfully deactivate their account.
Requirement Traceability	PR-03
Priority	Low
Preconditions	• System is online • Pet owners must be logged-in
Postconditions	• Pet owners must be able successfully deactivates their account.
Actors	• Pet Owner
Flow of Actions	Basic Flow <i>Pet Owner deactivates account</i> 1. Pet owner clicks on the “Account” icon in the navigation bar 2. Pet owner clicks on the “Profile” button 3. Pet owner is redirected to Profile page 4. Pet owner clicks “Deactivate” button 5. The system asks pet owner to enter their password. 6. The system validates password. 7. The system will logout pet owner and redirects them back to login page.

	Alternative flow <i>Pet Owner provides invalid password</i> 1. Pet owner clicks on the “Account” icon in the navigation bar 2. Pet owner clicks on the “Profile” button 3. Pet owner is redirected to Profile page 4. Pet owner clicks “Deactivate” button 5. The system asks pet owner to enter their password. 6. The system validates password. 7. The system will ask again the user to enter their valid password.
--	---

3.3.5 Use Case #5

Use Case Name: Manage Account Upgrade to Service Provider Access

Use Case ID:	UC-05
Author	Lalainne Andaya
Purpose	Service provider must be able to switch from the normal pet owner view to a service provider account so they can have access to service provider features.
Requirement Traceability	PR-13
Priority	High
Preconditions	• System is online • Pet service providers must be logged-in
Postconditions	• The service provider can access features specifically for service providers
Actors	• Service provider
Flow of Actions	Basic flow <i>Pet owners switch to Service Provider role for the first time</i> 1. Click “Switch to [Business Name]” button on the navigation bar 2. System verifies if user has an active listing 3. Pet owner is redirected to service provider view page. Alternative flow <i>User clicks Become a Service Provider Button without Logging In</i> 1. Open webapp 2. User is brought to the home page 3. User clicks “Become a Service Provider” button from the homepage. 4. The user is redirected login page to login to their account first. <i>Pet owner does not have an existing listing</i> 1. Click “Switch to [Business Name]” button on the navigation bar 2. System verifies if user has an active listing 3. Pet owner is redirected to service provider application form to start the application <i>Pet owner does not have an existing listing, but unfinished application</i> 1. Click “Switch to [Business Name]” button on the navigation bar 2. System verifies if user has an active listing and unfinished application

	3. Pet owner is redirected to service listing page to finish the application. <i>Pet owner has a pending application</i> 1. Click "Switch to [Business Name]" button on the navigation bar 2. System verifies the user's application status 3. The system will show a modal that says, "Your application has been submitted and is currently being reviewed by our team." <i>Pet owner has a rejected application</i> 1. Click "Switch to [Business Name]" button on the navigation bar 2. System verifies the user's application status 3. The system will show a modal that says, "Your application was not approved at this time." along with the reasons for rejections.
--	---

3.3.6 Use Case #6

Use Case Name: Manage Account Administrator Login

Use Case ID:	UC-06
Author	Feliz Salting
Purpose	Administrator must be able to login successfully and access the platform.
Requirement Traceability	• PR-02 • PR-10
Priority	High
Preconditions	• Administrator is provided admin credentials by the super admin • Administrator has changed their default password • System is online
Postconditions	• Administrator must be able to login successfully and be redirected to the administrator interface.
Actors	Administrator
Flow of Actions	Basic Flow 1. Open webapp 2. Administrator is brought to the login page 3. Administrator clicks "Login" button from the homepage. 4. Input email and password 5. Administrator clicks "Login" 6. The system validates input and determines administrator role. 7. Administrator will be redirected to the administrator interface. Alternative Flow <i>Incorrect credentials</i> 1. Open webapp 2. Administrator is brought to the home page 3. Administrator clicks "Login" button from the homepage. 4. Input email and password 5. Administrator clicks "Login"

	6. The Administrator is prompted with a message “Invalid email or password” 7. The page stays in the login page <i>Unchanged provided password</i> 1. Open webapp 2. Administrator is brought to the home page 3. Administrator clicks “Login” button from the homepage. 4. Input email and password 5. Administrator clicks “Login” 6. The system validates if the admin changed their password 7. The system will redirect the admin to another page to update their password

PR9: The system shall process payment verification uploads and display confirmation status within 5 seconds of submission.

PR10: Administrative actions such as approving or rejecting service provider listings shall be completed and reflected in the system within ???

~~TODO: Provide performance requirements based on the information you collected from the client/professor. For example, you can say "P1. The secondary heater will be engaged if the desired temperature is not reached within 10 seconds".~~

4.2 Safety and Security Requirements

Security Requirements include:

SR1: Only authenticated users with valid furlink accounts shall be allowed to access system features beyond public browsing.

SR2: The system shall enforce Role-Based Access Control (RBAC) to restrict functionality based on user roles, including Pet Owner, Service Provider, and Administrator.

SR3: All user credentials shall be securely stored using industry-standard hashing techniques.

SR4: The system shall ensure that all client-server communications are protected using HTTPS to prevent data interception and tampering.

SR5: The system shall securely store uploaded files, including pet images and payment verification documents, with controlled access permissions.

SR6: The system shall log critical user activities such as account registration, booking creation, booking cancellation, payment verification submission, and administrative approvals for audit purposes.

SR7: The system shall restrict service provider dashboards and reports to authorized service provider accounts only.

SR8: The system shall restrict administrative access to approved administrator accounts and prevent unauthorized users from performing administrative actions.

SR9: The system shall validate all uploaded files to ensure that only supported file types and file sizes are accepted.

SR10: The system shall prevent unauthorized modification or deletion of service listings, bookings, and user data.

4.3 Software Quality Attributes

<Specify any additional quality characteristics for the product that will be important to either the customers or the developers. Some to consider are: adaptability, availability, correctness, flexibility, interoperability, maintainability, portability, reliability, reusability, robustness, testability, and usability.

Write these to be specific, quantitative, and verifiable when possible. At the least, clarify the relative preferences for various attributes, such as ease of use over ease of learning.

*TODO: Use subsections (e.g., 4.3.1 Reliability, 4.3.2 Adaptability, etc...) provide requirements related to the different software quality attributes. Base the information you include in these subsections on the material you have learned in the class. Make sure, that you do not just write "This software shall be maintainable..." Indicate how you plan to achieve it, & etc...Do not forget to include such attributes as the design for change (e.g. adapting for different sensors and heating/AC units, etc.). Please note that you need to include **at least 2** quality attributes. You can Google for examples that may pertain to your system.>*

4.3.1

4.3.2

4.3.3

5 Other Requirements

*<This section is **Optional**. Define any other requirements not covered elsewhere in the SRS. This might include database requirements, internationalization requirements, legal requirements, reuse objectives for the project, and so on. Add any new sections that are pertinent to the project.>*

Appendix A – Data Dictionary/ERD

<Data dictionary is used to track all the different variables, states and functional requirements that you described in your document. Make sure to include the complete list of all constants, state variables (and their possible states), inputs and outputs in a table. In the table, include the description of these items as well as all related operations and requirements.>

Figure 3 furlink ERD

Appendix B - Group Log

<Please include here all the minutes from your group meetings, your group activities, and any other relevant information that will assist in determining the effort put forth to produce this document>

Appendix C – Test Plan/Test Cases
